Manufacturer's declaration

Dear Sir or Madam

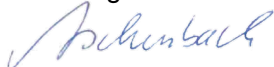

We hereby confirm the following points for the use of the HVIDBJERGVINDUET A/S window system ZELALUX Raufipro profiles and REHAU window System Nordic Design Plus which both are manufactured from the REHAU materials RAU-PVC1406 and RAU-PVC1963. We hereby confirm also for use the REHAU window System Brilliant Design which are manufactured from RAU-PVC1406.

The RAU-PVC1406 and RAU-PVC1963 formulations used by REHAU do not contain any intentionally added lead or cadmium compounds. The limit value for cadmium in recycled PVC mentioned in Annex XVII of the REACH Regulation is complied with. The formulations RAU-PVC1406 and RAU-PVC1963 do not contain any intentionally added tin compounds. It should be noted that the visible outer sides of the profile are manufactured with the formulation RAU-PVC1406. This is based exclusively on stabilisers with a calcium/zinc base. The chlorine used for PVC production was not produced via amalgam electrolysis. We hereby confirm compliance with the SVHC content of <0.1% for the formulation.

Our window systems are equipped with extruded soft PVC seals. The formula of the seals also complies with the SVHC content <0.1% specifications. We do not use any plasticisers in accordance with QNG Annex Document 3.1.3 Group E and can therefore also confirm that the proportion of phthalate plasticisers that are toxic to reproduction is <0.1%.

For colour aspects, our window systems can be extended with a lacquering or foil lamination, as well as with aluminium facing shells. For film lamination, we only use RAL-certified films from Renoilt and Continental, which comply with the SVHC limit values. The adhesives and sealants used in our window system comply with the specifications for chlorinated paraffins and halogenated blowing agents as well as VOC.

Best Regards

i.V. Saskia Aschenbach
Head of Material+Test+Quality Windows Solutions
