Super energy units with warm edge is standard

**Uw-value element 1230x1480:
Fixed light: 1,26
Frame/sash: 1,35**

On the inside fingerjointed genuine pinewood

OKO 2 treated, two-coat water-based finish environmental friendly

Slim profiles provide maximum inflow of light

Alux® - the new generation

is a revolutionary improvement of the traditional timber /aluminium window with an outside surface of maintenance free aluminium and a warm and comfortable window of genuine pinewood on the inside.

The new construction with an insulating profile between the outside aluminium and the inside wooden part effectively prevents thermal bridges and condensation.

The insulating profile is made from composite and designed with insulating compartments giving a significant improvement of the Uw-value of the frame/sash construction.
